1.2. OBJETIVO ESPECIFICOS

Los objetivos específicos de este proyecto son:

- Crear Categorías para perfilar los productos.
- Llevar un conteo de existencia de cada producto.
- Habilitar y deshabilitar los productos.
- Crear un registro de ventas.
- Llevar reportes de ventas (diarios, semanales o mensuales).
- Poder agregar o descontar productos de la compra.
- Agregar el carrito de compra productos.
- Descontar productos del carrito de compras.
- Permitir al usuario recuperar su contraseña a través de un correo electrónico.

2. CONTENIDO TECNICO

2.1. HERRAMIENTAS UTILIZADAS PARA EL DESARROLLO

2.1.1. PHP: Es un lenguaje de programación principalmente utilizado para desarrollar páginas web, este ofrece una ventaja y es que se puede

mezclar con código HTML. Las ejecuciones que este realiza, son ejecutadas en un servidor y por su parte el cliente es el encargado de recibir dichas peticiones. Si el cliente realiza una petición, se ejecuta el intérprete de PHP y se genera el contenido de manera dinámica. Este lenguaje permite conexión con varios tipos de bases de datos como: MySql, Oracle, Postgress y SQL Server. Este lenguaje de programación puede ser ejecutado en la gran mayoría de sistemas operacionales y puede interactuar con los servidores WEB más reconocidos.

2.1.2. MYSQL: Es un gestionador de bases de datos el cual permite ser utilizado por varios usuarios, fue desarrollado como software completamente libre. Este gestionador es de uso libre para servidores WEB.

2.1.3. APACHE: Es un servidor web HTTP de código abierto para la creación de páginas y servicios web. Es un servidor multiplataforma, gratuito, muy robusto y que destaca por su seguridad y rendimiento. Su código fuente se puede distribuir y utilizar de forma libre. Ofrece algunas ventajas, tales como: Independencia de plataforma, es decir que permite el cambio de plataforma en cualquier momento sin ningún inconveniente. También permite la creación de contenidos dinámicos, permitiendo así la creación de sitios WEB, mediante el lenguaje PHP.
